

## UNWINDING SYSTEMS

Systems with 2 to 32 plies can be proposed

The **unwinder** is the most standard unwinding system. It is compact, has a 45° paper twisting system and a walkway to collect the empty shafts.

Electrical hoists, motorised angular shifting, .....are quoted for optionally.

The **unwinder** includes a dancing roll festoon for a manual flying splicing of the plies at full speed. It is compact, has a 45° paper twisting system and a walkway to collect the empty shafts.

Electrical hoists, motorised angular shifting,.....are quoted for optionally.

The **ATC-90 unwinder** includes a dancing roll festoon for a manual flying splicing of the plies at full speed. It is specially designed for heavy and stiff board and has larger diameter idlers, a 90° paper twisting system (twice 45°) and a walkway to collect the empty shafts.

Electrical hoists, pneumatic festoons, motorised angular shifting,.....are quoted for optionally.

UNWINDER
